Introduction

This Help provides all the information you need to install and uninstall Silk Test. It describes hardware and software requirements and details the various setup options.

System Requirements and Prerequisites

The following section identifies the system requirements for installing and running Silk Test.

Hardware Requirements

We recommend the following hardware requirements:

System Area	Requirement
Processor	Intel or AMD DualCore processor running at 2 GHz
RAM	2 GB
Hard disk space	2 GB of free disk space

Platform Support

Platforms

Silk Test 13.6 is designed to run on the following platforms:

- Microsoft Windows XP SP3
- Microsoft Windows Vista SP2
- Microsoft Windows 7
- Microsoft Windows 7 SP1
- Microsoft Windows 8

Technology Domains and Browsers

Silk Test 13.6 supports applications that use the following browsers or are developed in:

Note: You can only test Adobe Flex applications with Silk4NET if you have a Web plus Flex license for Silk4NET. For additional information on the licensing modes, see *Licensing Information*.

Technology Type	Supported Version
Adobe Flex	4.0, 4.1, 4.5.1, 4.6
Mozilla Firefox (playback only)	17, 18*
Google Chrome (playback only)	24*
Windows Internet Explorer	8, 9, 10
Java Applets	Java 1.6, Java 1.7

* Indicates a rapid release version of a browser. Such versions have a short product life-cycle and are frequently replaced by newer versions. Silk Test supports rapid release versions as long as the issuing vendor supports them. This means that the next Silk Test version will probably not continue to support the indicated versions, but might support newer versions.

Visual Studio Environment

You can integrate Silk4NET in Visual Studio 2010 Professional or later.

Adobe Flex Support

Note: You can only test Adobe Flex applications with Silk4NET if you have a Web plus Flex license for Silk4NET. For additional information on the licensing modes, see *Licensing Information*.

Note: Silk Test does not support testing child domain technologies, including Adobe Flex, for Web applications running in Google Chrome.

Silk Test supports Adobe Flash Player 10 or later.

Administrator Privileges

You must have local administrator privileges to install Silk Test. Once Silk Test is properly installed, you must also have administrator privileges in order to run Silk Test.

Items Included with Silk4NET Web Edition

When you install Silk4NET, the following items are available:

- Silk4NET
- Product Notification Service - This application resides in the system tray and will check for updates at a configurable interval.
- Online Help topics

Access the help from within each product from the **Help** menu.

- Release Notes

For information about new features, supported platforms and versions, known issues, and work-arounds, refer to the *Silk Test Release Notes*, available from <http://supportline.microfocus.com/productdoc.aspx>.

- Online tutorials from <http://supportline.microfocus.com/productdoc.aspx>

You must have Adobe Acrobat Reader™ to view PDF documents.

- Sample applications that you can access online

- Adobe Flex sample applications

Access Flex sample applications at <http://demo.borland.com/flex/SilkTest13.6/index.html>.

- Insurance Company Web application

You can access the Web application at: <http://demo.borland.com/InsuranceWebExtJS/>.

Licensing Information

Unless you are using a trial version, Silk Test requires a license.

The licensing model is based on the client that you are using and the applications that you want to be able to test. The available licensing modes support the following application types:

Licensing Mode	Application Type
Web	<p>Web applications, including Java-Applets.</p> <p> Note: If you are using a trial license, visit http://www.borland.com/store/silktestwebedition/silk4NET-webedition to buy a Web license.</p>
Web plus Flex	<p>Web applications, including the following:</p> <ul style="list-style-type: none"> • Adobe Flex • Java-Applets <p> Note: To upgrade your license to a Web plus Flex license, visit www.borland.com.</p>
Full	<ul style="list-style-type: none"> • Web applications, including the following: <ul style="list-style-type: none"> • Adobe Flex • Java-Applets • Adobe Flex • Java AWT/Swing • Java SWT and Eclipse RCP • .NET, including Windows Forms and Windows Presentation Foundation (WPF) • Rumba • Windows API-Based <p> Note: To upgrade your license to a Full license, visit www.borland.com.</p>
Premium	<p>All application types that are supported with a <i>Full</i> license, plus SAP applications.</p> <p> Note: To upgrade your license to a Premium license, visit www.borland.com.</p>

 **Note:** To use a Full or a Premium license, you require a different setup package. The information in this document applies only to the Web Edition of Silk4NET. For a detailed overview of the capabilities of the Full and Premium offering, see [Release Notes](#).

Installing Silk Test

This section explains the setup options that are available when installing Silk Test.

Installation Prerequisites

Before installing Silk Test, verify the following information:

- Your user account possesses local administrator privileges.

Resetting the *TEMP* Environment Variable

If your Windows *TEMP* environment variable does not point to a valid directory, an error message is displayed. To successfully install Silk Test, your *TEMP* environment variable must point to a valid directory.

1. Choose **Start > Settings > Control Panel**.
2. Double-click **System**.
3. Click the **Advanced** tab, and then click **Environment Variables**.
4. Under **User Variables** or **System Variables**, double-click the *TEMP* variable.
5. Enter a valid directory, and then click **OK**.
6. Restart the Silk Test installation by double-clicking the EXE file.

Installing Silk4NET Web Edition

The Silk4NET Visual Studio plug-in enables you to create VB.NET or C# test scripts directly in Visual Studio. When you install Silk4NET, Silk Test Recorder and the Open Agent are also installed. Silk Test Recorder enables you to record tests rather than manually coding them. The Open Agent is required to run Silk4NET and Silk Test Recorder.

1. Locate and double-click the Silk Test executable file.

If you have a Silk Test CD, insert your CD. If the setup program does not start automatically, manually start the Silk Test setup program by choosing **Start > Run** and entering `<cddrive>:\setup.exe`.

Note: If your Windows *TEMP* environment variable does not point to a valid directory, an error message is displayed. To successfully install Silk Test, your *TEMP* environment variable must point to a valid directory.

The **InstallAnywhere** wizard opens.

2. If you previously installed a version of Silk Test, click **Uninstall** and then click **Next** to remove all installed features.
You must uninstall any earlier versions before you install a new version.
3. Click **Next**. The **License Agreement** opens.
4. Read the license agreement carefully. If you accept the terms of the agreement, click **I accept the terms of the License Agreement**.
5. Click **Next**. The **Choose Install Folder** page opens.
6. To change the default installation directory, perform the following steps:
 - a) Click **Choose**. The **Browse For Folder** dialog box opens.

- b) Specify the folder in which you want to install Silk Test, and then click **OK** to return to the **Choose Install Folder** page.

The location displays in the **Where Would You Like to Install?** text box.

7. Click **Next**.

8. Specify whether you want to create Windows firewall exceptions.

Note: This step is only available for Windows XP, Windows Vista, Windows 7, and Windows Server 2008.

a) Click one of the following option buttons:

- **Yes** – To have setup create firewall exceptions for all Silk Test executable files. As a result, you are not prompted to block or allow the executable files when you launch them.
- **No** – To be prompted when you launch the Silk Test executable file.

b) Click **Next**.

9. Review the provided information and perform one of the following steps:

- To change any settings, click **Previous** to return to the appropriate page.
- If you are satisfied with the settings, click **Install** to start the installation process.

Tip: If a message appears stating that there is not enough space while files are copying, redefine the TEMP area to a drive that contains more space. The installer uses the TEMP area for unzipping files. For example, if your TEMP area is `d:\temp` and you are installing to `e:\SilkTest`, the E drive may contain enough space for the installation, but the D drive is the limiting factor.

The status bar provides information about the installation process. Upon completion, the **Choose Licensing Mode** page opens.

10. Click one of the following option buttons:

- **Evaluation version** Installs an evaluation version of Silk Test, which grants you full product functionality for 30 days. To upgrade to a full version at a later point in time, contact your sales representative.
- **Full version** – Installs an unrestricted version of Silk Test, which requires a license.

11. To install the license file, perform the following steps:

a) Click **Configure your license server** and then click **Next**.

The license utility checks your local system for the existence of SilkMeter license server configuration files. If the files are found, the configuration and type of license server are displayed and used for licensing. If no configuration data is found, the **Select SilkMeter License Server** page is displayed with the default settings.

b) From the **Application** list box, select **Silk Test** as the application you are licensing.

c) Click one of the following option buttons:

Using local or remote server

In the **License Server Host** text box, type the name of the computer on which SilkMeter is installed. Do not change the default port number, 5461, unless your network administrator has defined a different port. Click **Apply** to generate your license server configuration. Click **Test Connection** to verify that a SilkMeter server is accessible on the specified host and port. Testing the connection to the license server might fail during installation as required system libraries, which are installed later with the software package, might not yet be available.

Note: In some cases, specifying the simple name of the license server in the **License Server Host** text box, such as `licenseserver`, might not work. A message box stating `there is no license server running on the hostname you specified` opens. To resolve this

issue, specify the hostname by using a fully qualified name, such as `licenseserver.mycompany.com`.

Not using server (standalone)

Runs SilkMeter standalone. You are prompted to import a SilkMeter license file. Click **Yes** and specify the location of your license file.

d) Click **Close**.

Fastpath: A working network connection is required when running Silk Test with a remote SilkMeter license server. If you need to verify that the network is working, choose **Start > Run**, and then type `ping localhost` or `ping <license server name>`, or open a command prompt and type either of those commands.

The **Install Complete** page opens.

12. Click **Done**.

13. Restart Visual Studio if it was running when you performed the Silk4NET installation.

When installation completes, a menu option appears for Silk4NET and the Silk4NET project is available from the **Installed Templates** list.

Installing the Silk4NET Visual Studio Plug-in Manually

The Silk4NET Visual Studio plug-in enables you to create Visual Basic or C# test scripts directly in Visual Studio. You can install the Silk4NET Visual Studio plug-in when you install Silk Test using the Silk Test installation wizard.

Use this procedure:

- If you upgrade your version of Visual Studio after you install the Silk4NET plug-in.
1. Execute the file `MicroFocus.SilkTest.Silk4NET.vsix` in the folder `<Silk Test installation directory>\ng\Silk4NET`.
By default the location is `C:\Program Files\Silk\Silk Test\ng\Silk4NET`.
 2. In Visual Studio, verify that the menu option for Silk4NET appears and that the Silk4NET project is available from the **Installed Templates** list.

Uninstalling Silk Test

When you install a new version of Silk Test, the wizard prompts you to uninstall any existing versions of Silk Test. You can also uninstall Silk Test from the programs menu at any time.

1. Click **Start > Programs > Silk > Silk Test > Administration > Silk Test Uninstall**. The **InstallAnywhere** wizard opens the **Uninstall Silk Test <version>** page.

2. To remove all files from the installation directory, check the **Remove all files** check box.

If you check this check box, the following items or folders are removed:

- The Access database and samples
- The contents of `[AppDATA]/Silk/Silk Test`

For example, on Windows 7 this directory is located at: `C:\Users\[username]\AppData\Roaming\Silk\Silk Test`

- The contents of `[commonAppData]/Silk/Silk Test`

For example, on Windows 7 this directory is located at: `C:\ProgramData\Silk Test`

- The contents of [commonAppData]/Silk/Silk Test Workbench

For example, on Windows 7 this directory is located at: C:\ProgramData\Silk Test Workbench

3. Click **Uninstall**. If any files were not removed, a list of the files is provided.
4. Click **Done**.
