Introduction

This document provides instructions for installing each of the components of Orbix 3.0.1 on the Windows platform. The components of Orbix 3.0.1 are as follows:

Component	Version
Orbix	3.0.1
Orbix Code Generation Toolkit	3.0.1
OrbixNames	3.0.1
Orbix Wonderwall	3.0.1

Platform

Windows NT 4.0 (Service Pack 4).

License Code

You must have a valid license code from IONA Technologies to install Orbix 3.0.1. The code is a long text string taking the general form:

00000000-11111111-22222222-33333333-44444444

Your license number should be included in a loose sheet in your Orbix 3.0.1 pack. If you do not have a license, contact IONA before proceeding any further.

There is a separate valid license code for OrbixCOMet that should be included in your product package. You must use this code when installing OrbixCOMet. If you supply a blank or invalid license code, the installation defaults to a 21-day evaluation license. Refer to the *OrbixCOMet Desktop Getting Started* for more details.

Prerequisites

You must have Microsoft Visual C++ 6.0 (service pack 2) installed on your system before you can install Orbix 3.0.1 for Windows.

You must have a Java Development Kit (JDK) or Java run-time environment installed in order to run the Orbix Wonderwall utilities. However, the installation of Orbix includes a Java run-time environment. Therefore, if you install Orbix first, you do not need to install a separate JDK or Java run-time environment before installing Orbix Wonderwall.

If you have an existing installation of Orbix 3.0, remove this before installing Orbix 3.0.1.

Installation Instructions

To install Orbix 3.0.1 from the CD-ROM:

1. From the root directory of the CD-ROM, run `autorunc.exe`. This opens the screen shown in Figure 1 on page 3.
2. Select the button corresponding to the Orbix 3.0.1 component that you wish to install.

OrbixNames and Orbix GUI Tools are automatically installed when you install the Orbix component.

If you are installing OrbixCOMet, refer to the *OrbixCOMet Desktop Getting Started* for more details.

3. Follow the on-screen instructions.

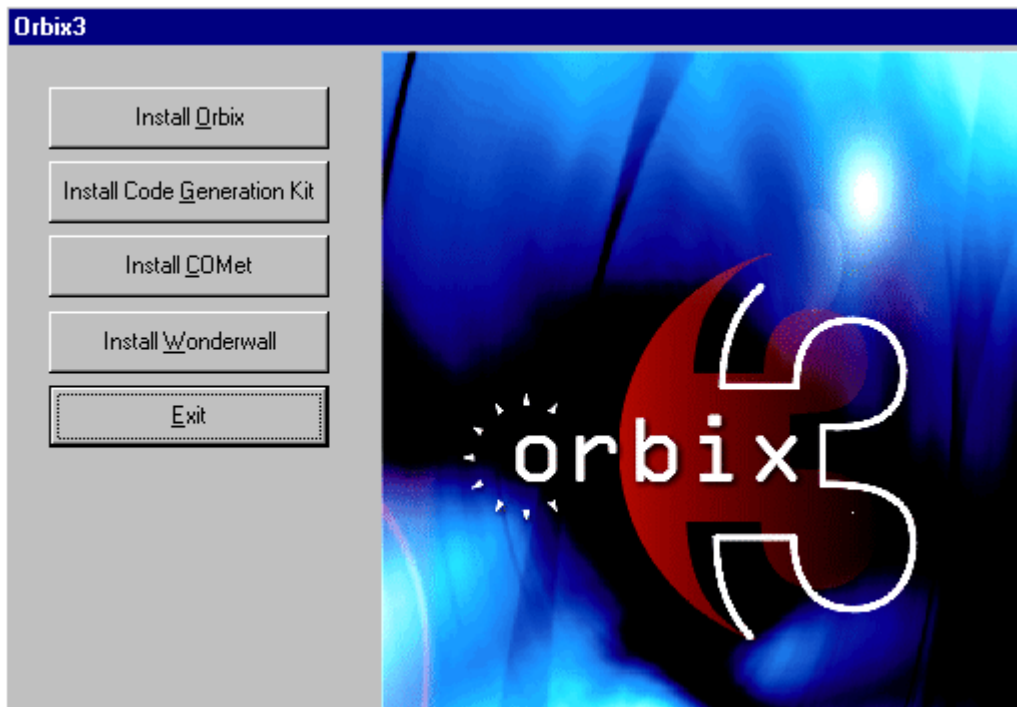

Figure 1: *Installing Orbix 3.0.1 Components*

Installation Notes

Some of the Orbix 3.0.1 components share individual files that are removed by the uninstall programs. For this reason, if you need to reinstall one component, you should uninstall and reinstall the entire set of components. This ensures you have all files for all component programs.

When installing Orbix components, if you have already installed another component, the previously chosen directory is automatically assigned by a value stored in the Windows Registry. Once Orbix components have been installed you should use this previously installed location to ensure that your Orbix configuration points to the same directory.

The default location of your Orbix installation is `c:\iona`.

Structure of Installed Directories

When you have installed all of these packages (assuming you select the default locations) you will have the following directory structure:

<code>\bin</code>	Binary images for all components.
<code>\config</code>	Repositories and configuration files for all components.
<code>\contrib</code>	Utilities contributed by IONA engineers and partners.
<code>\demos</code>	Demonstrations for all products.
<code>\doc</code>	Links to the latest information on Orbix.
<code>\idl</code>	IDL files for all components.
<code>\include</code>	Header files for all components.
<code>\lib</code>	Library files for all components.
<code>\Tools</code>	All Orbix GUI tools.
<code>\Orbix</code>	Demonstrations and documentation specifically for the Orbix component.
<code>\OrbixNames</code>	Demonstrations and documentation specific to OrbixNames.
<code>\COMet</code>	Demonstrations and documentation specific to OrbixCOMet Desktop.
<code>\Wonderwall</code>	Demonstrations and documentation specific to Orbix Wonderwall.
<code>\IDLGen</code>	Demonstrations and documentation specific to Orbix Code Generation Toolkit.

Testing the Installation

The following directories contain demonstrations specific to the component products:

```
\Orbix\demos
\OrbixNames\demos
\COMet\demos
\Wonderwall\demos
\IDLGen
```

You can compile and run these applications to check your installation. Refer to the individual `readme` files for more details.

The `\demos` applications applying to all products are documented in HTML files. Refer to `\demos\index.html` for details of how to build and run these demonstration applications.

Note: Before running an existing application, developed with an older version of Orbix, recompile it using Orbix 3.0.1.

For Further Information

If you require further technical assistance in using this product, please contact support@iona.com.
